

AHMAD BILTO

Unity Gameplay & Tools Developer

Amman, Jordan | Open to remote and relocation | +962 79 040 5940 | biltoa@outlook.com
ahmadbilto.com (portfolio) | linkedin.com/in/ahmad-bilto | github.com/Biltoa

Unity gameplay and tools developer with ten shipped titles across mobile, Steam, and PlayStation, three published solo, including Realistic Hajwala at 200,000+ downloads. Eight Editor and build tools used daily by a 12-developer team.

SHIPPED TITLES

Solo (Tazigra, iOS and Android): Realistic Hajwala; Gravity Grid; Word Shift

Mad Hook: Highway Drifter: Hajwala Online, Amer: Cop Pursuit (iOS, Android, Steam, PS4, PS5); Amer: The Chase Hit and Run (iOS, Android, PS5); Amer Fighting (Steam, PS5); Highway Drifter: Hajwala Drift, Amer Tycoon: Idle, Rooftop Run (iOS, Android)

EXPERIENCE

Independent Unity Developer | Tazigra, Amman, Jordan

Dec 2023 – Present

Solo developer; Tazigra is the LLC I publish under. Full-time since Aug 2026; part-time before that.

- Built and published Realistic Hajwala solo on iOS and Android, a Gulf-style drifting game with 8-player Photon PUN2 multiplayer (rooms, car and customization sync, ownership). Past 200,000 downloads, about 80% organic net of paid UA, and 30,000 Android and 7,000 iOS monthly actives.
- Raised it from 24 to 60 FPS on an iPhone 13 Pro in full-traffic city gameplay and cut that scene from 2,160 to 180 draw calls, using occlusion culling, LODs, traffic pooling, simplified physics on distant cars, texture compression, upscaled sub-native rendering, and Mesh Atlas Builder, an Editor tool I wrote that merges a mesh hierarchy and its materials into one mesh and one atlas.
- Cut Android crash rate from 4% to 0.57%, ANR from 6% to 0.81%, and slow cold starts from 9% to 1.11%.
- Reworked economy and progression over six months; iOS Day-1 retention moved from about 20% to 38%, measured in Firebase and GameAnalytics. Five A/B-tested store variants lifted App Store install conversion from 24% to 27%.
- Shipped Gravity Grid, a block puzzle with a generator and solver producing 10,000 validated levels, and Word Shift, a sliding-tile word game with frozen, chained, multiplier, and bomb tiles; both localized into 12 languages with Arabic RTL shaping.

Unity Developer | Mad Hook, Amman, Jordan

Aug 2024 – Aug 2026

- Wrote code in all seven studio titles and personally shipped 30+ updates to four live games with no player progress lost.
- Replaced the input controller across Highway Drifter: Hajwala Online and built its touch, keyboard, and gamepad schemes; retuned inherited car handling and owned draw-call optimization on the console builds.
- Built Amer Tycoon: Idle alone from an empty project: progression, offline earnings, upgrade economy, and save migrations that carried players through three major economy rewrites.
- Wrote six Editor tools the 12-developer team used daily: Sprite Generator (3D props to inventory icons), GPU Instanced Painter, Shadow Baker, Texture Optimizer, LOD and Impostor Baker, and Project Validator.
- Built a one-button pipeline producing Android, iOS, Steam, and PlayStation builds from a single Editor command, with versioning, pre-build validation, Addressables rebuilds, and code stripping; 40+ releases went through it in a year.
- On an unreleased title, built a grid-based building system with free placement, replacing per-variant meshes with Shader Graph wall cutouts, plus FSM-driven character controllers.
- Mentored a junior developer on SOLID principles, code quality, and project structure.

Unity Developer & Instructor | Maysalward, Amman, Jordan

Mar 2024 – Jun 2024

Trained six students and interns in C#, Unity UI, animation state machines, and mobile optimization.

Full-Stack Web Developer | Aramad Information Technology, Canada

Feb 2021 – Dec 2023

Built 20+ client sites and a WHMCS reseller platform automating hosting provisioning and billing (PHP, JavaScript, WordPress).

SELECTED PROJECT

NAV MCP | github.com/Biltoa/nav-mcp-unity

- .NET 8 server and desktop app that drives several Unity Editors at once through one client, tested across five instances on different Unity versions. 92 operations behind six tools, with batching, domain-reload recovery, and per-tool permissions. Idle context cost is 910 tokens against roughly 56,800 for a comparable commercial integration; 153 xUnit tests.

TECHNICAL SKILLS

Gameplay: C#, Unity 2021–Unity 6, vehicle and character controllers, finite state machines, Cinemachine, Input System, UGUI, UI Toolkit, inventory and progression, ScriptableObject data, Photon PUN2

Tools and pipeline: Unity Editor extensions, .NET 8, multi-platform build automation, Addressables, Unity Cloud Build, Shader Graph, custom URP shaders, xUnit, Plastic SCM, Git, Agile

Performance: Unity Profiler, Frame Debugger, URP, GPU instancing, draw-call reduction, occlusion culling, LODs, texture atlasing and compression, object pooling, crash, ANR, and cold-start reduction

Platforms and live ops: iOS, Android, Steam, PS4/PS5, App Store Connect, Play Console, SDK integration (Google Play Games, Game Center, PlayStation, Steamworks, Firebase, AppsFlyer, GameAnalytics, AdMob and AppLovin mediation), IAP, live ops, paid UA, A/B testing, ASO, Unity Localization

EDUCATION

Dickinson College, Carlisle, PA | Computer Science coursework, two years completed | Aug 2017 – May 2019

King's Academy, Madaba, Jordan | High School Diploma | 2017
