

AHMAD BILTO

UNITY GAMEPLAY & TOOLS DEVELOPER

Amman, Jordan | Open to relocation and remote | +962 79 040 5940 | biltoa@outlook.com

Portfolio: ahmadbilto.com | LinkedIn: linkedin.com/in/ahmad-bilto

SUMMARY

Unity gameplay and tools developer with six shipped titles across iOS, Android, Steam, and PS4/PS5, including a multiplayer driving game built and published solo to 100,000+ downloads and roughly 37,000 monthly active users. Writes the C# gameplay systems a game runs on and the Unity Editor tooling that ships it. Owns features from prototype through store release and live operations.

TECHNICAL SKILLS

Gameplay Programming: C#, Unity, character and vehicle controllers, finite state machines, AI behavior, grid based building and placement, inventory and progression, JSON serialization, Photon PUN2

Tools & Editor Scripting: Unity Editor extensions, multi platform build pipelines, asset import automation, pre build validation, LOD and octahedral impostor generation, mesh and material combining, texture atlas generation

Performance & Rendering: Unity Profiler, Frame Debugger, URP, Shader Graph, GPU instancing, occlusion culling, draw call reduction, texture atlasing, object pooling, light baking, LODs, Jobs System, Burst, Addressables

Platforms & Workflow: iOS, Android, Steam, PS4/PS5, App Store and Google Play submission, PlasticSCM, Git, Jira, Blender, Agile/Scrum, Firebase, GameAnalytics, AdMob, AppLovin

Familiar With: Java, Python, JavaScript, PHP, SQL

EXPERIENCE

Unity Developer | Mad Hook, Amman, Jordan

Aug 2024 - Aug 2026

- Built and owned gameplay systems in Unity and C# across five cross platform titles totaling 10M+ downloads, including *Amer Tycoon: Idle* (built from scratch) and *Highway Drifter: Hajwala Online* (iOS, Android, Steam, PS4/PS5).
- Architected the core systems: a custom vehicle controller plus a heavily extended Realistic Car Controller Pro, kinematic and physics based character controllers driven by finite state machines, a grid based building and decoration system wired to progression and inventory, and a custom JSON save system.
- Improved performance from **24 to 60 FPS** on low end Android devices, profiled with Unity Profiler and Frame Debugger.
- Wrote the Unity Editor content tooling used by the 12 developer team: mesh and material combining with generated atlases, a vertex color combiner paired with a GPU instanced recoloring shader, and 3D asset to UI sprite baking with no render scene.
- Automated the release and optimization path with LOD chains ending in octahedral impostors, shadow baking to ground sprites, folder scoped texture import rules, a project validator, and a one button multi store build pipeline behind **40+ store releases**.
- Increased Day-7 retention **26% relative** and ad ARPDAU **10%** through economy, progression, and telemetry tuning; increased install conversion **13% relative** with playable ads and capture scenes; mentored a junior Unity developer.

Independent Unity Developer | Tazigra, Amman, Jordan

Dec 2023 - Present

- Designed, built, and shipped a multiplayer driving game solo on iOS and Android in Unity with Photon PUN2, reaching **100,000+ downloads** at roughly 80% organic, with 30,000 Android MAU and 7,000 iOS MAU.
- Built the entire feature set alone: a heavily modified RCCP vehicle controller, custom JSON saves, dynamic day and night weather cycles, and a mobile optimized traffic system.
- Increased monthly ad revenue **86% in two months** through mediation tuning, tracking 32.6% iOS Day-1 retention in Firebase and GameAnalytics; prioritized the update roadmap from retention and monetization data.

Unity Developer & Instructor | Maysalward, Amman, Jordan

Mar 2024 - Jun 2024

- Shipped gameplay features and content updates for live mobile titles, stabilized iOS and Android builds through release, and trained 6 developers in C#, Unity UI architecture, animation state machines, and mobile optimization.

Full-Stack Web Developer & IT Support | Aramad Information Technology, Charlottetown, Canada

Feb 2021 - Dec 2023

- Built and maintained 20+ client websites and a WHMCS reseller platform automating hosting provisioning and billing, using PHP, JavaScript, and WordPress.

EDUCATION

Dickinson College, Carlisle, PA | Coursework toward B.S. in Computer Science (2 years completed)

Aug 2017 - May 2019

King's Academy, Madaba, Jordan | American High School Diploma, GPA 3.91/4.0

Aug 2013 - May 2017
